

SocietyHub

Smart Residential Society Management Platform

The Connected Operating System for Modern Residential Communities

SocietyHub is a centralized digital platform designed to manage the complete lifecycle of a residential society — from society registration and resident onboarding to maintenance, accounting, security, governance, communication and analytics.

Core

Vision

One Society. One Platform. One Source of Truth.

Key Areas

Administration • Residents • Finance • Security • Operations • Community • Governance • Analytics

1 Executive Summary

What is SocietyHub?

Residential societies manage hundreds of residents, units, payments, complaints, visitors, staff, vendors, assets and documents. Managing these activities through spreadsheets, paper registers and multiple disconnected applications creates unnecessary complexity. SocietyHub brings these activities together into one connected platform.

SocietyHub manages:

- Society administration
- Buildings and units
- Residents and family members
- Committee
- Staff and domestic help
- Vendors
- Maintenance billing
- Payments
- Accounting
- Expenses
- Budget
- Complaints
- Visitors
- Deliveries
- Parking
- Amenities
- Assets
- AMC
- Documents
- Notices
- Events
- Meetings
- Voting
- Reports
- Notifications
- Audit logs

Core Objective

The objective is not simply to digitize individual activities.

The objective is to create a connected digital operating system for the entire society.

2 Problem with Traditional Society Management

Why Societies Need Digital Transformation

A typical society may use:

- Excel for resident information
- Paper for visitor records
- WhatsApp for communication
- Separate accounting software
- Manual complaint registers
- Physical documents
- Manual maintenance calculations
- Separate vendor records

Problems

1. Data Duplication

The same information may be entered in multiple places.

2. Manual Work

Committee members spend significant time performing repetitive administrative tasks.

3. Lack of Transparency

Residents may not have visibility into:

- Payments
- Expenses
- Complaints
- Notices
- Society activities

4. Poor Tracking

Important activities can be forgotten:

- AMC expiry
- Vendor contracts
- Complaint follow-up
- Maintenance dues
- Document expiry

5. Difficult Scaling

A society with 20 residents may manage manually.

A society with 200–1,000+ residents cannot efficiently depend on manual processes.

3 SocietyHub Solution

One Connected Society Ecosystem

SocietyHub creates a centralized environment where every important society activity is connected.

Central Principle

Every module should use shared master data.

For example:

Resident → Unit → Society

The same resident information can then be used by:

- Maintenance
- Complaints
- Parking
- Visitors
- Amenities
- Notifications
- Reports

Result:

Enter information once. Use it across the ecosystem.

4 Complete Society Lifecycle

From Registration to Intelligent Society Management

The Important Change

SocietyHub should not start with residents or maintenance.

It starts with:

Society Registration

The registered society becomes the root organization for everything that follows.

5 Society Registration

Step 1 — Create the Society

The first user is the person responsible for creating the society account.

Registration Information

- Society name
- Official registration number
- Address
- City
- State
- Pincode
- Contact details
- Society type
- Number of buildings
- Approximate number of units
- Registration documents

Registration Process

Society becomes the Root Entity

All future records are linked to the society.

6 Chairman & Society Setup

Step 2 — Chairman Becomes Primary Administrator

After registration, the Chairman enters SocietyHub.

Instead of immediately showing hundreds of unrelated modules, SocietyHub provides a guided setup process.

Chairman Responsibilities

- Configure society
- Manage committee
- Configure financial rules
- Manage residents
- Manage staff
- Manage vendors
- Configure amenities
- Monitor operations
- View reports

Important:

The Chairman becomes the primary administrator, but permissions can later be delegated to:

- Secretary
- Treasurer
- Committee members
- Society manager

7 Society Structure

Step 3 — Build the Digital Society

The physical society must be represented digitally.

Unit Information

- Unit number
- Building
- Floor
- Type
- Area
- Occupancy status
- Owner
- Tenant
- Parking
- Vehicles

Unit Status

- Occupied
- Vacant
- Owner occupied
- Tenant occupied

Why this is important

The Unit becomes a central reference for:

- Resident
- Maintenance
- Parking
- Complaints
- Utility billing
- Documents
- Visitor access

8 Resident Self-Registration

Fast Onboarding for 200+ Residents

This is one of SocietyHub's key differentiating features.

Instead of the Chairman manually creating 200 resident accounts:

Residents can securely register themselves using the Society's unique Society ID or QR code.

Step 1

Society is registered. SocietyHub generates:

Society Code: SV-7K29X4

Step 2

Chairman shares the code through: WhatsApp, Email, SMS, Notice board, QR code.

Step 3

Resident scans QR or enters code:

Society Code Entry

[SV-7K29X4]

Verify Society

Step 4

System identifies the society: **Green Valley Residency** ✓

Step 5

Resident registers: Name, Mobile, Email, Unit, Resident type, Password.

Step 6 — Verification

The registration request can be: OTP verified, Matched with pre-created unit information, Approved by Chairman.

Why This Matters:

For 200–500+ residents, this drastically reduces manual onboarding work.

9 People & Access Management

Complete People Ecosystem

SocietyHub manages different categories of people.

- **Residents:** Owners, Tenants, Family members
- **Committee:** Chairman, Secretary, Treasurer, Members
- **Staff:** Security, Housekeeping, Maintenance, Gardeners, Supervisors
- **Domestic Help:** Maid, Cook, Driver, Nanny
- **Vendors:** Lift vendor, Electrical vendor, Security agency, Fire safety, Plumbing, Housekeeping

Role-Based Access

- **Chairman** → Full Administration
- **Treasurer** → Finance
- **Security** → Visitors / Vehicles
- **Resident** → Own Services
- **Staff** → Assigned Operations

10 Maintenance & Billing

Complete Maintenance Lifecycle

Configure Charges

- Monthly maintenance
- Water
- Parking
- Sinking fund
- Repair fund
- Security
- Common electricity
- Other charges

Billing Rules

Fixed amount, Area-based, Unit-based, Meter-based, Custom.

Additional Features

Due dates, Late fees, Interest, Discounts, Waivers, Previous dues, Carry-forward balance.

11 Payments & Accounting

From Payment to Financial Record

A payment should not only mark a bill as "paid."
It should update the entire financial ecosystem.

Accounting Capabilities

General ledger, Income, Expenses, Receivables, Payables, Resident ledger, Vendor ledger, Journal entries, Debit, Credit, Adjustments.

Payment Support

UPI, Online payment, Bank transfer, Cash, Cheque.

Special Cases

Partial payment, Advance payment, Refund, Credit note, Debit note, Waiver, Adjustment.

12 Expenses, Vendors & Procurement

Managing Where Society Money Goes

Expense Categories

Security, Electricity, Housekeeping, Repairs, Lift maintenance, Garden, Water, Administration.

Expense Workflow

Vendor Lifecycle

Procurement

Requirement, Quotation, Comparison, Approval, Purchase order, Delivery, Invoice, Payment.

Budget

Society can compare: **Budget vs Actual Spending**.

13 Complaint & Helpdesk

Centralized Resident Support

Residents should not have to depend on WhatsApp messages to report problems.

Complaint Categories

Plumbing, Electrical, Lift, Water, Cleaning, Security, Parking, Common area, Maintenance.

Status Lifecycle

Open, Assigned, In Progress, Waiting for Vendor, Resolved, Reopened, Closed.

Management & Analytics

Chairman can assign complaints, set priority, track SLA, escalate delays, and monitor performance.

Analytics include: Total complaints, Open complaints, Overdue complaints, Average resolution time, Category-wise complaints, Staff/vendor performance.

14 Security, Visitors & Parking

Complete Security Ecosystem

Visitor Types

Guests, Delivery, Cab, Contractors, Service providers, Domestic help.

Delivery Management

Delivery Arrives → Security Records → Resident Notification → Collection.

Vehicle Management & Parking

Vehicle registration, Vehicle type, Number, Owner, Unit, Status.

Slot allocation, Parking transfer, Visitor parking, Temporary parking, Parking charges, Vehicle stickers/passes.

Future Innovations

QR entry, ANPR, Access control, Smart gates.

15 Amenities, Assets & AMC

Managing Shared Society Resources

Amenities

Gym, Clubhouse, Swimming pool, Party hall, Sports area, Community hall, Garden.

Amenity Booking Flow

Assets & AMC

Assets: Lift, Generator, CCTV, Fire equipment, Pumps, Solar, Gym equipment.
Asset Information: Purchase date, Warranty, Vendor, Location, Cost, Status.

AMC Workflow

16 Communication, Documents & Governance

Community & Governance

Communication

Notices, Announcements, Push notifications, Email, SMS, WhatsApp.

Documents

Society registration, Bye-laws, Audit documents, Vendor contracts, AMC documents, Receipts, Resident documents.

Document Features: Upload, Search, Categorization, Access control, Versioning, Expiry reminders.

Governance

Meetings: AGM, Committee meetings, Agenda, Attendance, Minutes.

Voting: Polls, Elections, Resolutions, Results.

Events: Festivals, Sports, Community activities, Workshops.

Governance Meeting & Voting Flow

17 Reports, Analytics & Automation

From Data to Decision Making

SocietyHub should provide real-time visibility into society operations.

Chairman Dashboard

- **Residents:** Total residents, Owners, Tenants, Vacant units
- **Finance:** Collection, Outstanding, Expenses, Budget
- **Operations:** Complaints, Visitors, Parking, Amenities
- **Assets:** Active AMC, Expiring AMC, Maintenance

Reports

Financial: Collection, Outstanding, Expenses, Income, Budget vs actual, Ledger, Vendor payments, Bank reconciliation.
Operational: Complaints, Visitors, Parking, Staff attendance, Assets, AMC.

Event-Driven Automation Triggers

18 Security, Roles, SaaS & Future

Enterprise Platform Capabilities

Security & Audit Trail

Authentication, Authorization, Role-based access, Society data isolation, API security, Audit logs, Backup, Recovery.

Audit Trail records: Who?, What?, When?, Before?, After?

Multi-Society SaaS Isolation Architecture

Super Admin & Future Innovations

Super Admin manages: Society onboarding, Plans, Subscription, Support, Platform configuration, Usage.

Future Capabilities: Mobile app, PWA, WhatsApp integration, Smart gates, ANPR, IoT, Smart meters, AI analytics, Predictive maintenance.

19 Overall SocietyHub Architecture

Complete SocietyHub Architecture

Most Important Principle

Society is the root. Unit is the operational foundation. Resident is linked to the unit. Transactions belong to the society and/or unit. Every operational activity flows back into the central society record.

The Most Important Product Flow

SocietyHub does not simply digitize individual society tasks. It connects the complete society lifecycle into one centralized, secure and scalable platform.
